

By virtue of the Integrated Management System (Quality and Environmental) policy, and within the environmental section, BRAUSA takes into account the life cycle of the services it provides. This entails that:

Inputs and outputs are considered in all environmental processes.

Environmental aspects and impacts caused by our activity are periodically evaluated.

A system has been implemented to update the applicable Environmental Legislation and identify the requirements applicable to our activity.

Environmental aspects, specifically, waste generation and the use of resources, are periodically assessed.

Action plans for possible environmental emergencies have been established and implemented.

Likewise, BRAUSA has information on environmental performance at the disposal of interested parties who request it. To request said information, send an e-mail to comercial@brausa.es, indicating the environmental data requested and the reason why it is requested.
